1. Business Mission & Overview

NexaLearn Inc. is a cloud-native Software-as-a-Service (SaaS) provider delivering a high-availability Learning Management System (LMS) for global Higher Education institutions.

Our mission is to provide global universities with a highly secure, reliable, and accessible cloud classroom environment that protects student privacy and ensures learning never stops.

2. Core Service Offerings

The NexaLearn platform delivers the following primary cloud-native services:

1. **Virtual Classroom Portals:** Multi-tenant web interfaces where 500,000+ students and 20,000+ faculty log in to access course materials, lecture streams, and assignments.
2. **Identity & Access Gateway:** Centralized authentication pathways integrating with university Single Sign-On (SSO) infrastructure.
3. **Digital Payment Hub:** A secure financial portal handling student tuition billing and institutional platform subscriptions.

3. Regulatory & Threat Landscape

As an enterprise EdTech vendor, NexaLearn operates under strict legal, regulatory, and threat pressures that dictate our security requirements:

- **FERPA (Family Educational Rights and Privacy Act):** Enforces strict confidentiality of student academic and personal records.
- **GDPR (General Data Protection Regulation):** Mandates data privacy and consumer rights for our European university partners.

- **The Current Threat Horizon:** Recent high-profile cyberattacks on educational applications (such as the Canvas LMS security incidents) demonstrate that identity theft, credential stuffing, and cloud API vulnerabilities are active threats to our business model.

4. Defined System Boundaries (Scope)

- **IN-SCOPE:** All AWS production environments, database clusters hosting student PII, core application source code, and employee authentication logs.
 - **OUT-OF-SCOPE:** Corporate HR facilities, physical employee remote-work home offices, and personal devices owned by students or university staff.
-
